

Airport Final Approach Tracks

This folder contains the Final Approach Tracks for various airports.

Inside each zip file there are two outline files;

- the first file contains the approach tracks (i.e. FA-ICAO.out),
- the second contains an outline of the runways - no taxiways or stands, just the runways (i.e. FA-ICAO-rwy.out)

The tracks are based on a straight in approach as if there is an ILS. If the runway doesn't have an ILS, or aircraft use an offset approach, the aircraft may not appear on the final approach centre line.

Copy the outline ".out" files into your Basestation Outline folder - default for XP is C:\Program Files\Kinetic\Basestation\Outlines.

The tracks have been generated from data that I have extracted from various sources. Although I often check the data using Google Earth, I have no way of knowing how accurate the tracks are. A confirmation email would be appreciated.

Your airport not listed ? If you would like the Final Approach Tracks for your local airport, please send an email to acarslogger@hotmail.com with the required ICAO code / name. Please note this is NOT an automated facility and it may take a few days before the tracks are published on this web site.

If you find any errors or you require further information you can email me at acarslogger@hotmail.com.

Have fun.
